

ABSTRACT

A fork lift including a fixing member for fixing a seat to a forward facing position or a clockwise or
5 counterclockwise rotated position, and a release for releasing a seat fixed in the position by the fixing member. The fixing member includes a fixed plate fixed to a body side and an engaging lever provided on the seat, the fixed plate having first to third notches
10 formed corresponding to each of the forward facing position and clockwise and counterclockwise rotated positions. The engaging lever is formed to be engageable with and disengageable from the first to third notches and removed from the first to third notches by the
15 release.
